PMMA

POLYMETHYLMETHACRYLATE

# P M M A

---

PMMA is a highly **transparent thermoplastic** polymer obtained from the polymerisation of the monomer methyl methacrylate.

Due to its high transparency, aesthetics and scratch resistance, it is the **ideal material to incorporate interior light** and turn the pieces into magical luminaires for decoration.

# MANUFACTURING

---

Since our beginnings, we have made a strong commitment to R+D+i and we are **continuously researching new materials and processes**.

In 2018 we incorporated PMMA through the injection process.

The result is **transparent pieces with the possibility of incorporating an LED module** that enhances the surface of the pieces through projections on the engraved PMMA.

# FEATURES

---

**Autonomy, light graduation and the possibility of choosing colours** by means of touch technology are some of the qualities of a unique, innovative and attractive product, from a technical and design point of view.

Lamps ideal for creating **extraordinary atmospheres**.

# FINISHES

---

**Clear PMMA.**  
PMMA translúcido.

**Cristal 4101**

**Fume 4103**

**Amber 4102**

# CLEANINGS AND CARE

---

Our production is governed by the standards of our quality assurance system ISO 9001:2008 and environmental system ISO 14001:2004. And we use only the **highest quality materials** to guarantee a long product life.

Place the part on an even **surface with no slope** to avoid uncontrolled movement.

If the LED stops working, **do not handle it under** any circumstances and contact the manufacturer or distributor of the product.
